Creating Scenario Testing For Automation Testing

Scenario 1 Study Case E-Commerce Mapclub:

Add product to cart shop

Test Case:

Given: User visit to website e-commerce (https://www.mapclub.com) and log in to the application

When the user searching the product desired for example Samsung A34

And user visits one of the product details about the Samsung A34

And user Add products by clicking Add Cart

And user visit the cart page

Then user View products added to the cart

Expected Result:

displays products in the cart page

Another Case:

Delete the products on the cart page so that the website is clean before you want to run the automation again

Scenario 2 Study Case Website Traveloka:

Search for car rental without a Driver and see detailed product

Test Case:

Given: User visit to the website (http://www.traveloka.com)

When the user visit the tab content car rental

And select Pick-up Location (e.g.: Jakarta)

And Select Pick-up Date & Time

And Select Drop-off Date & Time

And Click the button Search Car

And select a car (e.g.: Toyota)

And Select Car Provider

Then user redirected to the product detail

Expected Result:

The user redirected to product details and displays product details according to the user's input
